Lesnoy Dozor*¹

The system «Lesnoy Dozor» is designed for monitoring large areas and detection of forest fires on early stages. Today it is successfully used in many (over 15) regions of Russian Federation. There are positive feedbacks from the customers. Besides that, we have negotiations to implement the system «Lesnoy Dozor» in other regions of Russia, as well as in foreign countries.

Our system is designed for monitoring large areas and detection of forest fires with the help of modern technologies, which are supposed to be the most effective. For your reference we attach information materials on this topic. In addition, information about the system can be found at www.lesdozor.ru.

The main feature of the system lies in the fact that it can be deployed in short terms, while it will benefit immediately after installation.

The benefit, that our partner-integrator receives collaborating with us.

- 1) Profit – from realization of the projects of deploying and supporting systems of monitoring of forests (or other large areas) and detection of fires.
- 2) Getting of technically workable schemes for realizing projects. This greatly simplifies market entry and subsequent work in corresponding segments. When you collaborate with us, you get a full set of technical documents to deploy such systems.
- 3) The status of an official partner of "DSC" - a market leader in designing and developing systems of monitoring forests and large areas to detect fires.

¹ Lesnoy Dozor – Forest Watch

We are ready to consider all types of partnership, including:

1. the work of local organization as our representative
2. the creation of joint venture (if it's necessary)
3. the registration of joint intellectual property rights, etc.

If you are interested in our offer, email us and answer the following questions:

1. If it will be reasonable to use such system in your environment?
2. What methods of monitoring and detection of forest fires are already used on other fire-dangerous territories in your region?
3. Is infrastructure of telecommunication and high-rise construction ready for the deployment of such systems?
4. How the forests are managed in your region? Who is the owner, or manager of them? Who can be a potential customer?

Today we are searching and planning to begin negotiations with mobile operators and potential customers.

We look forward to your questions, suggestions and wishes.

With respect,
The Director of LLC «DSC»

Ivan Shishalov.
