

Cooperation options

1. To organize Partnership for manufacturing of planar optical couplers, optical routers, optical transceivers, fiber-optic sensors or other communication devices (industry, medicine, etc.) in the Republic of Mari El (Russian Federation). Each partner shall have 50% of the profit. Manufacturing of fiber-optic components and optical electronic devices is a promising area of production in Russia and around the world.

Contribution of foreign partner:

- Equipment
- Know-how
- Personnel training (2-3 persons)
- Technical support

Our contribution:

- Premises with infrastructure
- Organization of production, personnel, accounts, legal support
- Support of the President of the Republic of Mari El
- Sales and logistics in Russia

2. Warehousing, distribution of products of the foreign partner in the entire Russian region, logistics and marketing.

Why is it profitable to launch a partnership:

1. Cheap labor force in comparison with the regions of Central Russia. The average male salary is ranging from 400 to 500 USD per month and that of a female is approx. 300 to 400 USD per month.
2. Support from the local Government. Because we have to solve different questions constantly.

3. Qualified personell.
4. Own construction business.
5. There is a technical university, the radio-faculty, we have good connections with these organizations and they can prepare good qualified specialists by our order.
6. Good ecological conditions.
7. There is our republic innovation program, and we will get in it if there is such production and the assembling. They won't give us the money but there will be tax and bank loans benefits.
8. There is the territory for the local techno park. But to tell the truth it is not built-up and without infrastructure. If we build, the ground will be free of charge or practically free of charge.
